Professional Summary

Backend Software Engineer with production experience building REST APIs, relational schemas, and async microservices in Python/FastAPI and Java/Spring Boot. Delivered 15+ zero-rollback production APIs and built end-to-end payment processing, backed by strong DSA fundamentals (640+ problems solved, Top 32.3% globally).

EXPERIENCE

EllocentLabs

Feb 2026 - July 2026

Software Developer Intern

Mohali, Punjab

- Delivered 15+ production REST APIs into a live ATS platform with zero rollback incidents, independently owning system design and authentication flows.
- Eliminated failed uploads across 500+ file batches by re-architecting a synchronous bulk-import pipeline into an asynchronous, status-tracked microservice (Python, FastAPI).
- Reduced duplicate candidate records to zero across 15+ production endpoints by designing SQL-based email-match upsert logic on PostgreSQL, and removed manual data entry by building automated server-side resume-parsing that auto-fills candidate forms.
- Improved platform-wide observability at negligible added latency by building a non-blocking, cursor-paginated activity-logging microservice for troubleshooting and alerting.

PROJECTS

CareerFlow – Smart Job Application Tracking Platform

[Live Demo](#) | [GitHub](#)

- Tech:** Java 17, Spring Boot 3, Spring Security, PostgreSQL, React, Docker, GitHub Actions
- Secured a 63-endpoint REST API using multi-provider authentication (OAuth2 via Google/LinkedIn/GitHub, plus email/BCrypt) under a unified user model, issuing JWTs with database-backed token blacklisting and role-based access control.
- Scaled a normalized 15-entity PostgreSQL schema to 130,000+ records with indexed pagination, deployed via CI/CD as two independently deployable Dockerized services.
- Validated system reliability with 200 automated tests (192 JUnit 5 + Mockito, plus Vitest frontend tests) and added platform-wide audit logging (19+ typed actions) with admin system-health monitoring.

MovieTix – Online Movie Ticket Booking Platform

[Live Demo](#) | [GitHub](#)

- Tech:** Node.js, Express.js, MongoDB, Stripe, React.js, Redux Toolkit, Tailwind CSS, JWT
- Prevented double-booking under concurrent seat selection by implementing real-time, MongoDB-backed seat-availability locking across simultaneous checkout sessions.
- Built 3-tier role-based authorization (users, theatre admins, super admins) with JWT authentication and integrated Stripe for end-to-end payment transaction processing, deploying frontend and backend as independently scalable services.

Resufit – AI resume analyzer with ATS scoring.

[GitHub](#)

- Tech:** Next.js/React (TypeScript, Tailwind, Vite), Spring Boot (Java 17), Flask (Python), Google Gemini AI, MongoDB, AWS S3
- Built a full-stack, microservices-based resume-matching platform (React frontend, Spring Boot backend, Python/Flask NLP service) that analyzes resumes against job descriptions and returns ATS compatibility scores with actionable feedback.
- Integrated Google Gemini AI with a PDF/DOCX text-extraction pipeline and asynchronous processing, using MongoDB for persistence and AWS S3 for secure file storage, exposing results through REST APIs.

EDUCATION

Thapar Institute of Engineering and Technology

Sep 2022 – July 2026

Bachelor of Engineering in Computer Science and Business Systems

Patiala, Punjab, India

- Coursework:** DSA, Operating Systems, Computer Networks, Database Systems, OOP, Software Design (Agile/Scrum)
- Achievements:** 640+ problems solved on LeetCode (246 Easy, 331 Medium, 63 Hard) — Contest Rating 1,550, Top 32.3% globally

SKILLS

Core Programming : Python, SQL, Java, JavaScript, TypeScript, C++

Backend : FastAPI, Flask, Spring Boot 3, Spring Security, Node.js, Express.js, REST APIs, JWT, Microservices

Frontend : React, Next.js, Tailwind CSS, Redux Toolkit, HTML/CSS

Databases : PostgreSQL, MySQL, MongoDB, Schema Design, Indexing & Normalization

Tools & DevOps : Docker, AWS S3, GitHub Actions (CI), Git, Postman, Swagger, Stripe API
